FOREWORD

The 18th All India Livestock Census covering poultry as well as agriculture implements, machinery and fishery statistics conducted in the state of West Bengal was completed in scheduled time by the Directorate of Animal Resources and Animal Health, Government of West Bengal, with 15th October 2007 as reference date.

This report has been prepared to be very effective with rural/urban as well as mouza/parawise elaborate breakups for each district. Moreover the introduction of a Geographical Information System (GIS) since last census year with digital mapping of livestock data at mouza, G.P., Block, Sub-Division (Rural) and District (Rural) level for rural areas and ward, Municipal area, Sub-Division (Urban) and District (Urban) level for urban area has added new dimension to the livestock census of our state.

In this connection I greatly appreciate the well coordinated team work of Dr. P. K. Bhattacharjee, Joint Director of Animal Husbandry (Statistics) as well as Additional State Livestock Census Officer, Shri T. R. Nath, Statistical Officer and Deputy State Livestock Census Officer, 18th Livestock Census, along with other Officers and Staff of the Animal Resources Development Department in making the 18th Livestock Census a successful one.

Like previous years this census report will be most utilized in formulating different welfare plans and schemes for the state as well as in various relevant research projects.

PREFACE

The final report of the 18th All India Livestock Census for the state of West Bengal with reference date 15th October 2007, has been successfully prepared within due time. This vast well compiled report with district-wise mouza/para level data consists of updated basic data on livestock and poultry population, agriculture implements and machinery, fisheries and livestock and fishery infrastructure.

The team of officers whose hard work and co-operation has been indispensable for the timely completion of census work and publication of the report are Dr. P. K. Bhattacharjee, Joint Director of Animal Husbandry (Statistics) and Shri T. R. Nath, Statistical Officer and Deputy State Livestock Census Officer, 18th Livestock Census, along with innumerable district and state-level Livestock Census Officers and Staff.

The information provided in the report will prove very useful to all those who use animal husbandry related data in their respective work areas.

INTRODUCTION

The Directorate of Animal Resources and Animal Health, Government of West Bengal in co-ordination with Government of India, Department of Animal Husbandry, Dairying and Fisheries, has completed the 18th All India Livestock Census in the state of West Bengal in due time. Apart from enumeration, supervision, compilation and tabulation, this huge census work also involves publication of both hard and soft copies of the report.

Dr. P. K. Bhattacharjee, Joint Director of Animal Husbandry (Statistics) and Additional State Livestock Census Officer, 18th Livestock Census, West Bengal, Shri T.R. Nath, Statistical Officer and Deputy State Livestock Census Officer, 18th Livestock Census, West Bengal and many other Officers and Staff of this directorate have efficiently shouldered the responsibility of completing the census work with perfection.

Planners as well as all people working in animal resources and associated sectors will be amply benefitted from the useful findings of this elaborate census work.

TECHNICAL ASPECTS OF THE 18TH LIVESTOCK CENSUS

The total count of livestock population and its composition is available from the livestock census, which is the most important single source of data. The Department of Animal Husbandry, Dairying and Fisheries, Ministry of Agriculture, Government of India, conducted the 18th Livestock Census with reference date 15th October 2007. The census operations are carried out in different States and Union Territories by the respective State Governments. Undoubtedly an expensive statistical exercise this census it is indispensable for understanding the demographic structure of our livestock so as to be properly equipped to carry out livestock improvement programmes in the country. The livestock census covers not only livestock but includes information on fisheries and agricultural implements and machinery.

In 1919-20, the first livestock census of cattle was conducted. The subsequent censuses were conducted at intervals of five years. 18 such livestock censuses have been completed till now.

In the 18th Livestock Census, breed-wise data of indigenous cattle, buffalo, sheep, goat, pig and fowl was collected for the first time in the State of West Bengal. In the present report the cross-bred and indigenous cattle have been clubbed together as in the earlier reports for comparability with the past.

Canvassed schedule of enquiry in each household obtains information on 512 items for each household. In addition, information on another 127 items on livestock and fishery infrastructure and commercial poultry birds stock is collected for each mouza, ward and each commercial poultry farm. Field workers undertake house-to-house enumeration to ascertain stock of livestock, agricultural implements and machinery, fishing craft and tackle (as well as number of persons engaged in fishing and ancillary activities), etc., possessed by households and institutions. The field work is mainly conducted by primary workers, consisting of staff drawn from the Animal Resources Development Department and Pranibandhu personnel¹.

State-level training of trainers was arranged at Barasat, in the district of North 24 Parganas. A manual of instructions was circulated to all districts. State-level Livestock Census Officers and Headquarters Officers of the Statistical Cell also trained the block/municipality/sub division Livestock Census Officers. The trained officers in turn trained the enumerators in the field work. A tabulation manual was prepared and sent to all districts to obtain the data in tabulated form.

Livestock, Poultry, Agricultural Implements and Machinery, and Fisheries are the four main parts of the Livestock Census. As these four parts involve a huge amount of data compilation, appropriate software called LCMS (Livestock Census Management System) has been developed. In West Bengal, Geographical Information System (GIS) has been developed for digital mapping of livestock data at all levels for each district. The systematic data base prepared in the 18th Livestock Census goes down to the level of mouza/para. The district profile includes pictorial graphs and the write-up gives a comprehensive account of the State's livestock position.

¹educated unemployed youths trained in livestock care by Paschim Banga Go-sampad Bikash Sanstha, a Govt. of West Bengal organisation

I would like to place on record my deep appreciation for Sri Anisur Rahaman, Hon'ble Minister-in-Charge, Animal Resources Development Department, Sri D.K. Chakraborty, IAS, Principal Secretary to the Government of West Bengal, Animal Resources Development Department and Dr. K. Saha, Director of Animal Husbandry and Veterinary Services, Directorate of Animal Resources and Animal Health for their constant encouragement in compilation of the Report on the 18th Livestock Census. Their valuable suggestions have greatly contributed to the successful completion of the Livestock Census.

We are thankful to Dr. D.K. Das, Chief Executive Officer, Paschim Banga Go-sampad Bikash Sanstha, for his encouragement in the engagement of Pranibandhus in the enumeration work.

This report has received immense help and cooperation from all officers and staff of the Animal Resources Development Department. I wish to express my sincere appreciation to all of them for their whole-hearted support.

The preparation of the report has been made possible primarily due to the keen interest of Sri Tushar Ranjan Nath, Statistical Officer and Deputy State Livestock Census Officer, 18th Livestock Census, West Bengal who worked very sincerely and with great zeal in achieving the target of releasing the results in the shortest possible time. Sri Nath developed the aspects of computerization, digital mapping and analytical work, and prepared the district profiles with the Assistance of Dr. Arindam Kundu, Statistical Officer and Assistant State Livestock Census Officer, Smt. Supriya Roy, Bengali Translator and Assistant Livestock Census Officer (Publicity) of this Directorate has also worked hard to make possible the elaborate and informative introductory write up on each of the nineteen districts and for the state of West Bengal as a whole. I also acknowledge the contribution made by other officers and staff of the Statistical Cell in bringing out the results in a very short time.

The statistical help received from the Bureau of Applied Economics and Statistics, Government of West Bengal Department of Animal Husbandry, Dairying and Fisheries, Ministry of Agriculture, Government of India and other different organisations/institutions for various analytical parts of the Report is thankfully acknowledged.

The management of Silpabarta Printing Press Ltd. (a Government of West Bengal Undertaking) and workers deserve appreciation for their untiring cooperation in printing of books and computerized tabulation.

I am sure that scientists, researchers, policy planners and livestock data experts will benefit immensely from the information contained in this publication. We look forward to suggestions and comments on the information contained in this publication, which will be valuable for our future publications.

Sanghamitra Ghosh, IAS,
District Magistrate
South 24-Parganas

Foreword

It is a pleasure to announce that 18th All India Livestock Census, Agriculture Implements and Machinery, Fishery Statistics, West Bengal has been successfully completed in South 24 Parganas district in due time. The census was conducted with a view to collect actual data for proper planning on Livestock Resources Development and upliftment of rural economy.

I hope all this information and data so prepared and compiled in this book will be immensely helpful to formulate micro-level planning associated with Animal Resources Development and researches.

I convey my thanks to all concerned for publishing this valuable document.

(*Sanghamitra Ghosh*)
District Magistrate
South 24-Parganas

Government of West Bengal

Office of the Deputy Director of A.R.D. & Parishad Officer, South 24 Parganas

Acknowledgement

It is a great pleasure for us that we have completed the 18th All India Livestock Census of South 24 Parganas successfully within the stipulated period though it was very difficult to complete such mammoth work within this period. This District consists of 7 Municipalities and 29 Blocks of which 13 Blocks are within Sundarban, the largest delta of the world. The District consists of 312 Nos. of Gram Panchayet with innumerable forest fringe villages, islands and other inaccessible riverine areas.

It is a great opportunity for me to express my gratitude to Savadhipati, District Magistrate and other District Level Govt. Officials for their encouragement and guidance while performing this task (as District Livestock Census Officer).

I express my sincere thanks to Sri Tushar Ranjan Nath Deputy State Livestock Census Officer for the guidance and contribution made by him throughout the work.

We record our sincere thanks to the Chairmen of 7 Nos. of Municipalities, three tier Panchayet authorities of this District for their active co-operation and the L.D.A.s, Pranibandhus, Vety. Officers, Block Livestock Development Officers, Staff whose active and sincere participation as Enumerators, Supervisors, Tabulators, Block Livestock Census Officers, enabled us to complete this work successfully.

We also acknowledge and place on record our sincere thanks to the District Level Officers and Staff of Animal Resources Development Department who directly and indirectly participated in preparing this useful report.

I am also very much thankful to the officers of Head Quarter & Staff whose bold efforts made 18th All India Livestock Census work a great success.

SOUTH 24-PARGANAS DISTRICT PROFILE

LOCATION :

This active delta district lies between 21°25'30" & 23°16'50" north latitudes and 88°01'10" & 89°06'15" east longitudes. It has artificial land frontiers as well as natural water boundaries. Nadia district lies to its north and the Bay of Bengal to its south. Much of its eastern boundary with Bangladesh runs along river channels, which being distributaries, often shift and raise problems of border demarcation. On the west, it is bounded by Kolkata and the river Hooghly, which proceeding from north to south, separates it from the districts of Hooghly, Howrah and Medinipur.

ORIGIN :

On 15th July 1757 Mir Zafar, whom the East India Company had just recognised as Nawab of Bengal, ceded to the Company the rights of 24 mahals. The treaty by which the secession is recorded says that "all the land lying to the south of Calcutta as far as Culpee, (Kulpi) shall be under the Zemindari of the English Company." The Parwana notifying effect to the Treaty mentions the name of the 24 units of granted land.

Thus the name of the district should really have been 24-Mahals since each unit of granted land was treated as Mahal, some being full parganas, others being parts of parganas and one being Malang Mahal. Perhaps "24 part Parganas" was found too cumbrous and the name was adopted as 24-Parganas.

The 1757 treaty vested the Company with zamindari rights, with the obligation of paying land revenue to the Nawab. By a sanad in 1759, Robert Clive was granted the 24-Parganas as a jagir, i.e. assignment of revenue in return for the services which he had rendered to the new Nawab. During this period most of the district was terra incognita inaccessible, under dense forests, tidal swamps and a maze of channels.

But the "revenue and civil jurisdictions of the district did not coincide for many years, owing to the fact that, at the time of the Decennial Settlement of 1787, the landed property in this part of the country was chiefly held by the Rajas of Burdwan, Nadia, and Jessore. Originally the district contained only 444 estates, but in 1816, when some estates were transferred from Burdwan, the number had risen to 564; these estates were retransferred to Burdwan in 1862."

In the 1780s reclamation and development of the Sundarbans was initiated by Tillman Henckell, Judge and Magistrate of Jessore. Many tribal people from the Chhotanagpur plateau and peasants from the adjoining districts were brought and settled here. Henckell's object was to introduce a body of peasant proprietors, holding directly under the Government. Gradually, vast forests changed into fertile rice fields and with the mixture of various ethnic and culture groups among the tenure holders, this frontier settlement evolved a distinct cultural personality of its own.

Regulation XIV of 1814 divided the 24-Parganas into two zilas; one comprising the suburbs of Calcutta (thanas of Chitpur, Maniktala, Tazerhat, Nauhazari and Salkhia) and the other rest of the district. Regulation VIII of 1832 again merged the two zilas.

For a considerable time the district was divided into Alipur and Barasat divisions. The former comprised the territory originally ceded to the Company, the latter included several paraganas that were transferred from Jessore and Nadiya in 1834. The Barasat Joint Magistracy was abolished in 1861 and the district was subdivided into 8 subdivisions excluding all villages to the west of the Hugli, extending the northern limits and adding land between Kabadak and Ichamati rivers from Jessore district. The Kabadak was declared the eastern boundary of the district. The Satkhira subdivision was detached and made part of Khulna district on the formation of the latter in 1882. The Baruipur subdivision came into existence in 1893. The latter was again reconstituted in 1904 to form portions of the Sadar (Alipur) and Barasat subdivisions. Until 1947 no major boundary changes took place but minor adjustment (such as the transfer of the new Alipur Central Jail to the jurisdiction of Calcutta High Court in 1913) have made the district boundary very complex.

From 1816, the administration of the Sundarbans was governed by Regulation IX of 1816, which provided for the appointment of a Commissioner in the Sundarbans, and vested him with the authority of a Collector of Land Revenue. This had been necessary, because, the country being extensive, wild and inaccessible, the work of developing its resources was beyond the capacity of the collectors of the adjoining districts. This arrangement was discontinued in 1905, by which time, mapping and resource inventory of Sundarbans were more or less complete and it was felt that the time had come to co-ordinate the administration of this tract with the general administration of the district. So the Sundarbans Act (Bengal Act I of 1905) transferred the functions of the Commissioner of Sundarbans to the Collectors of the three districts (24-Parganas, Khulna and Bakerganj within which the Sundarbans were comprised.

With the Partition of India, the 24-Parganas became an important border district and its size also increased. By notification No.545 GA of 23.2.48, the Bangaon subdivision was created by certain additions from contiguous districts. Till 28.2.1986 the district consisted of the following six subdivisions. (a) Bangaon (b) Basirhat (c) Barasat (d) Barakpore (e) Diamond Harbour (f) Alipur.

The territorial jurisdiction of 24-Parganas vis-à-vis Calcutta, and restricted areas under the control of Government of India, is very complex. For different kinds of functions, different sets of boundaries separate 24-Parganas from Calcutta. There is no common boundary as in the case of other districts i.e., boundaries of Calcutta accepted for municipal purposes, for the purposes of police administration, for administration of civil and criminal justice, land revenue, postal services or different branches working under the Public Works Department are not common and there are overlapping areas. There is a wide belt of cotenancy between Calcutta and 24-Parganas, as also between the subdivisions of 24-Parganas.

Cotenancy between Calcutta and 24-Parganas has persisted ever since the birth of these two districts. O'Malley's Bengal District Gazetteer of 1914 also distinguished the 'Suburbs of Calcutta' from the then existing 5 subdivision viz. Alipur, Barakpur, Barasat, Basirhat and Diamond Harbour. "The area known as the Suburbs of Calcutta, i.e., the municipalities of Cossipure-Chitpur, Maniktola and Garden Reach, is geographically part of the Alipore or sadar subdivision, but is classed separately as it is treated as a distinct unit for Census purposes, and its administration is, in several respects, different from that of the rest of the district.

For some administrative purposes the 'Added Area' of Calcutta forms part of the district. This, it may be explained, is the portion of Calcutta lying east and south of the Old Town (between the Circular Road and the Hooghly) and separated from it by the Circular Road.

"The 'Added Area' forms part of the 24-parganas for civil and criminal purposes, criminal cases arising within its limits being tried by the Police Courts at Sealdah and Alipore, and committed if necessary, to the sessions court at Alipore; but for municipal and police purposes it is an integral part of Calcutta."

Since 1947 there has been no change in the territorial jurisdiction of the Commissioner of Police, Calcutta. So the newly added areas to Calcutta Corporation (Wards 70, 94, 95, 96, 97, 98, 99 and 100), a triangular piece of land stretching from Ballygunge lake to Garia, still remains under the control of 24-Parganas and outside the jurisdiction of Calcutta Police.

TOPOGRAPHY :

South 24-Parganas encompasses the moribund, mature as well as the active parts of the Ganga delta. The direction of flow of the tidal channels, a few surface spot heights (which is nowhere above 9 metres) or abandoned river courses, ox-bow lakes and swamps, natural levees along the rivers and artificial embankments (to protect rail and road and to reclaim lowlying arable tracts from salt water) indicate the above mentioned two fold division of one vast plain, sloping very gently towards the sea.

The rich arable lands of the South 24 Pgs. District comprising the southern plains to the south of Calcutta between the old and present courses of the Hooghly. The bank of the Hooghly immediately west

of this low-lying plain is still lower by another 0.6 m. The ground rises, further south in the vicinity of Diamond Harbour below the confluence of the Hooghly and the Damodar rivers. The Damodar is the first important tributary to join the Hooghly in its lower reaches. It is partly responsible for raising the southern flood plains of the Hooghly higher than those of the north. Another 10 km. south of the Damodar confluence, the Rupnarayan enters the Hooghly at the head of its funnel-shaped estuary and supplements the work of the other two rivers in raising the level of the flood plains. These plains lie mostly over 6 m. above sea level. These higher areas are referred as Kulpi-Diamond Harbour –Falta plains.

"The Sundarbans consist of low-flat alluvial plains in which the process of land making is still going on, covered, where not under cultivation, with forests and swamps, intersected from north to south, by wide tidal rivers or estuaries, and from west to east, by narrow tidal creeks. All the estuaries, rivers and creeks carry saline water; there is no current down them except tidal outflow and inflow. They are connected with each other by an intricate mesh of channels, so that the whole tract is a tangled network of estuaries, rivers and water courses which enclose a large number of islands of various shapes and sizes. Most of these islands are mere swampy morasses, covered with low forest and scrubwood jungle, but those to the north, which are embanked, grow rich crops. This seaboard area is a typical specimen of new deltaic formation. It exhibits the process of land-making in an unfinished state, and presents the last stage in the life of a great river the stage in which it emerges through a region of half land, half water, almost imperceptibly, into the sea." Along the sea face, the forest is almost everywhere composed of mangroves, which sometimes extend into tidal water, but elsewhere are separated from the sea by a line of low sand hills or dunes. The chief estuaries, or tidal mouths of rivers where the channel broadens out and funnels in the bay tides, are the Muriganga or Baratala R., Saptamukhi, Thakuran or Jamira R., Matla R., Bangaduni R., Guasuba R. and Haribhanga R. on the Bangladesh border.

These estuaries are interspersed and separated by several large islands, of which the chief, from west to east, are as follows : (1) The Khasimara, Ghoramara, Lohachara and Sagar Island group (area 580.9 sq. km.) between the Hooghly and the Muriganga or Channel Creek, (2) New Island marking the southernmost limit of the State, (3) Mahisani (Brunswick) Island between Muriganga and Pitt's Creek, (4) Frasersganj (Mecklenburg) Island encircled by Edward's Creek, Bakkhali river and Saptamukhi (West Gully) estuary, (5) The Susni Char, Lothian, Prentice, Henry's and Frederick Island group comprising an area of 15,980.66 hectares but uninhabited at the mouth of the Saptamukhi in Namkhana P.S., (6) the Bulcherry Island between the Jamira and Matla, (7) Halliday Island in the Matla, (8) Dalhousie Island between the Matla and Guasuba, (9) Bangaduni Island at the mouth of Guasuba and many others yet to be named within the Sundarbans Forest Division. At the south-western extremity of Sagar Island stands the Sagar lighthouse; a large fair, known as the Ganga Sagar mela, is held on its southern face every year.

It is not possible to demarcate the coastline exactly; it is not only broken but also constantly changing with high and low water of the tides. The length of the crescent seaface (i.e., overlooking the irregular outline of the projecting islands) marking the outer boundary of India is about 150 km.)

SOIL :

The soil in the district can be classified into 5 categories viz., (i) Clayey soil or Matial found in Sagar, Kakdwip, Nanikhana, Patharpratima and in parts of Mathurapur, Jaynagar, Kultali and Canning P.S. with an approximate area of 1,40,000 hectares. This soil has been further subdivided into three varieties, which are in decreasing order of fertility – Kala Matial, Ranga Matial and Jhaira Matial, (ii) Loamy soil or Doash or Buliara, found in parts of Mathurapur, Kultali and Jaynagar P.S., comprising an area of about 34,000 hectares, (iii) Sandy loam is found mainly along the Thakuran, Piyali and Kultali rivers, (iv) Sandy soil predominates along the newly formed islands and is almost incapable of growing vegetation, (v) Silty soil found in pockets in the reclaimed areas and along the active distributaries of the Padma.

CLIMATE :

The climate of this district is characterized by an oppressive hot summer, high humidities nearly all the year round and well distributed rainfall during the monsoon season. The cold season about the middle of November to the end of February is followed by the summer from March to May. The south-west monsoon season is from June to September. October and the first half of November constitute the post-monsoon season.

The rainfall decreases from the south-east towards the north-west. Sagar Island in the south-west corner of the district has an average annual rainfall of 1802.7 mm. (70.97"). In the south-eastern corner of the Sundarbans the rainfall may be even higher than in Sagar Island. Barasat in the north-western part of the district gets 1508.2 mm. (59.37"), of rainfall in a year. The rainfall during the south-west monsoon months, June to September, constitutes about 74% of the annual rainfall. Some rainfall, mostly as thunder showers, is received in the latter half of the hot season and in October. The variation in the rainfall from year to year is not large. In the fifty year period, 1901 to 1950, the highest annual rainfall amounting to 142% of the normal occurred in 1933, while 1935 was the year with the lowest rainfall which was 62 percent of the normal. In the same fifty-years, no two of them being consecutive, in the district as a whole. But at some individual stations in the district rainfall less than 80% of the normal in two or three consecutive years, has occurred once or twice, and four consecutive years of such low rainfall occurred at Barasat during 1934-1937.

The temperature and humidity conditions in the Sundarbans region in the North 24 Pgs. with its swamps and marshes and the wide network of tidal channels, rivers, creeks and islands differs a little from those in the northern inland tracts. While the meteorological records at Alipur may be taken as representative of the conditions in the northern island tracts, the records at Sagar Island can be taken as typical of the Sundarbans region. The temperatures are generally lower and the humidities higher in the Sundarbans than in the rest of the district.

WATER RESOURCES :

The Hooghly : These great tributaries deflect the stream to the east for 13 km. up to Diamond Harbour and have set up in it, just above the Rupnarayan, the dreaded moving shoals known as the James and Mary Sands. In between Calcutta and Falta point some 6 creeks controlled by sluices (except Falta Khal) join the Hooghly from the 24-Parganas side. After Diamond Harbour the river resumes a southerly direction, until it debouches in the Bay of Bengal, its breadth at that point being about 30 km. Its mouth is locally known as the Burha Mantreswar. Shortly before it falls into the sea it bifurcates, the main channel passing west and the other, called Muriganga, goes east of Sagar Island. On the right or west bank the main channel receives the Haldi river from the Medinipur district opposite Mud Point, on the north of Sagar Island and about 25 km. lower down the Rasulpur joins it from the same district.

During the rainy season the spill streams from the Ganga-Padma and the streams descending from the Chhotanagpur plateau pour down enormous volumes of water, sand and silt which serve to scour out and maintain a deep channel on the one hand, and build up bars and sand banks on the convex meander curves on the other hand. In the dry season, when there is no such influx, the river is largely fed by percolation, and release of water of the Farakka barrage. In addition, the tides running up strongly, more especially during the dry season, provide water for navigation over the shoals. Navigation is rendered difficult by rapid currents, shoals and shifting sandbanks.

The Piyali : The Piyali leaves the Bidyadhari 15 km. below Bamanghata and flows south and south-west till it joins the Matla 32 km. below Canning, through the Kultala Gang. The Kultala Gang also links the Thakuran river.

The Calchara-Curzon Creek system : The Calchara-Curzon Creek lying in between the Saptamukhi and the Thakuran deserves special mention as it is deeper, narrower and has a larger tidal basin with a greater

volume of tidal influx than the two adjoining estuaries. The Curzon Creek is almost an estuary in itself, finding way into the sea in its last lap through the Saptamukhi East Gully for the last 10 km. The Sutarbag-Mridangabhanga-Calchara-Curzon Creek Saptamukhi East Gully constitute one continuous estuarine arm. The lateral branches or inter-connections of this arm with the Thakuran on the eastern side are the Chatua river, the Nukchara river, the Pukhara river, the Chirpat or Pakhirali khal, the Chaltaboni khal, Jagdal Gang and the Kankramari khal. On the right bank the different link channels with the Saptamukhi are the Saralda khal, the Barchara, the Walsh Creek and Rakshakali khal. The Saralda khal links the Mridangabhanga with the Gobadia river.

The Saptamukhi system : The Saptamukhi is wide and shallow, and as a result has a number of shoals. One such big shoal separates the main stream from the Ghughudanga Blind Creek. From north to south the Banstala-Ghughudanga Gang-Saptamukhi West Gully may be said to form one continuous arm, the East Gully being a distributary of the same on the other side of the Prentice and Lothian Islands. The major branches on the west are the Kalnagini khal, the Ghughudanga Gang and Blind Creek, Namkhana Creek, Patibonia river, Edwards Creek and Chandanpiri khal and Bagkhali river around Fraserganj island.

The Thakuran system : The Thakuran system is also very wide near the sea-face. The major lateral branches of the Thakuran on the western side are the Kadrakhali khal, the Damdama khal, the Moni river, the Pukchara, the Raidighi, the Sibua Gang the Pakhirali khal and the Ross Creek. The link channels on the eastern side with the Matla system are mostly meander loops, such as the Bainchapi khal, the Gura khal, the Kaikalmari-Ajmal mari-Suia river, the Dulibhasani Gang and the Chulkati Gang. These loops are interconnected amongst themselves by an intricate mesh of tidal channels.

The Matla system : The Matla is a very wide estuary comparable, near the seaface, with the Hooghly. About 50 km. from the seaface it braids into two channels almost equally viz., the Matla proper on the west and the Bidya river on the east, both arms moving up northwards parallel to each other in zig-zag courses. The lateral connections of the Matla on the west from the inland side are successively the Belladona river, the Kultala river, the Piyali Babipukur river, the Bainchapi khal, the Kaikalmari river, the Suia river, the Dulibhasani Gang, the Chulkati Gang and the Gokhaltali Gang. On the eastern bank, the main connections with the Gosaba and Raimangal systems are more intricate and much of it being terra incognita, most of the channels are yet to be named. The important channels in this belt are Rupkhali khal, Pathankhali Nadi, Pirkhali Nadi, Gazikhali khal, Panchmukhani khal, Mayanadi khal, Mayadip river, Bhangaduni river, Kalindi river, Kalagachia river, Raimangal river, Jhilla river, Gona river and the Harinbhanga river. The Harinbhanga is the western inlet of the Raimangal estuary through which runs the international border with Bangladesh. It is fed by the Ichamati and Kalindi in its upper reaches.

Marshes and khals : The South 24 Parganas, like other deltaic districts, is studded with marshes and swamps called bils situated at the centre of saucer shaped depressions. The elevated tracts of these depressions are marked by river courses. The rivers have built up high natural levees along their banks. There are also artificial protective embankments. From such high level the ground gradually slopes down-wards, forming a depressed tract between each set of two rivers. The depressed portions so constituted are natural basins in which water collects and from which it exits through tidal water courses called khals. There are innumerable marshes and khals. The one to the east of Calcutta is most important. Many of these marshes serve as bheris for pisciculture and the khals as navigable waterways in the otherwise impenetrable forests. Large areas of marsh land in the Sundarbans have been reclaimed and brought under tillage by means of embankments raised to keep out salt and brackish water. Some of the large marshes in the heart of the district have also been drained and rendered fit for cultivation by the construction of embankments and sluices; but as the basins served by these sluices are dependent on each other, it follows that whenever there is abnormally heavy rainfall, areas which are not properly provided with sluices are liable to suffer from the overflow of adjoining tracts, and the large central basins, which have no proper facilities of their own for the discharge of their surplus water, add to the volume contained in the surrounding basins.

Tidal waterways and danger from bores : The south 24 Parganas is intersected by a network of big tidal rivers, the estuaries of which penetrate far inland. Here the rivers flow not in a single channel, but in a multitude of astonishing channels, which serve as waterways. There are three important tidal waterways besides the Hooghly which connect Calcutta with the rest of the district and beyond. The northern route is known as the Inner Sundarbans Passage and the central one the Outer Sundarbans Passage. The southern route has served as the traditional Calcutta-Assam navigation link through the Sundarbans proper.

The tide of the Hooghly is occasionally so strong that it gives rise to the phenomenon known as a bore. This is the name given to the headwave which is formed when an unusually high tide is checked by the narrowing of the river channel. Bore tides appear in the River Hooghly during the spring tides. During neap tides, however, no bore occurs.

FLORA & FAUNA :

The most distinctive unit of vegetation occurs in the active delta popularly known as the Sundarbans about which we shall deal in detail under 'forests'.

The active delta, in the South 24 Parganas still growing southwards, is a system of innumerable tidal rivers, canals and creeks; sand dunes, saline soils, swamps and marshes. Much of it is terra incognita, due to the inaccessible 'Mangrove swamps', (the humid marshy tropical forests, called Sundarbans), which stretch for about 150 km. from west to east and 50 km. from north to south through a net-work of numerous tidal islands. The total expanse of the Sundarbans is about 2.05 million hectares (8,000 square miles) out of which 0.79 million hectares lie in the district of 24-Parganas. Of this, only 0.42 million hectares (1,629 sq. miles or 10,43,000 acres) are under reserve forests including about 0.190 million hectares (4,68,000 acres) covered by creeks and channels. Out of the remaining 0.374 million hectares recovered from forests, about 0.256 million hectares (1,000 sq. miles or 6,40,000 acres) are under cultivation. These reclaimed areas are at present protected by marginal embankments of a total length of about 3,500 km. (2,200 miles). This vast length of embankments, mostly of inadequate strength and section, came into existence gradually in course of time, and had been built by the individual settlers in an unplanned manner so as to serve only the individual local interest, as and when found necessary, without keeping an eye on the overall requirement of the entire area.

A newly formed island in this forest belt is first colonized by dhani grass and Baruna grass which are followed by tree species like baen, keora, and khalsi. After the soil has stabilised by regular deposition of silt from tide and river water, the next species to settle, are Goran, Gengwa, clumps of Hental and Golpatta. When the level is further raised, so that the islands are flooded only occasionally by salt water, the Kankra, Sundari and Passur make their appearance and soon occupy the greater portion of the land. Along the creeks, the species that always come up are Garjan and Dhundul. The red mangrove shows an ability not only to survive and colonize in an environment impossible for most other trees, but even to build up new land. A tangle of roots and trunks that seems at first indecipherable, a mangrove forest on closer examination sorts itself out into a meaningful structure that actually traps flotsam of all kinds in the shallow waters where it grows, gradually forming solid ground from the decaying mass. The origin of a mangrove forest can be a single seedling which germinates while the fruit still remains attached to the tree and before separating from the parent tree it develops a long radicle (1 to 2 feet long and $\frac{1}{2}$ inch in diameter at the tip). This radicle perforates the apex of the fruit and elongates while the fruit still remains on tree. When fully developed this elongated club-shaped radicle separates from the tree and falls perpendicularly down into the mud below by its own weight, and fixes itself there by its pointed and heavy end. Once rooted, the mangrove seedlings have been observed to grow an inch an hour and bear fruit when four feet high. The black mangrove develops special roots which, instead of going down and spreading under the soil, rise from the soil with their tips out into the air. These aerial roots are provided with a scabrous bark full of groups of airholes, called lenticels, through which the roots are aerated. Such roots are, therefore, known as breathing roots. All mangroves protect the shore from erosion and aid in the accumulation of

deposits of peat and mud. Mangroves are usually heavily populated beneath by snails, crabs and other marine species.

According to latest classification, the 24-Parganas has two types of forests. Salt Water Heritiera Forest and Low Mangrove. Both have dense impenetrable undergrowth. The upper storey of the former is comprised mainly of Gengwa, Passur, Dhundul and Sundari (Black mangrove). The latter group has composition similar to the first but the height of crop is much lower, Golpatta is almost absent while red mangroves (without breathing roots) are more common. It was estimated that out of 900 sq. miles (2331 sq. km.) of forested area about 801 sq. miles (2074.59 sq. km.) are under Salt Water Heritiera type and 99 sq. miles (256.41 sq. km.) are under Low Mangrove.

Out of different species available in the Sundarbans the only species that have potential to grow to sawable size are Passur, Keora, Gengwa and Sundari. Of these, only Passur grows to a girth of 6 ft. (1.828 m.) and is used for different constructional purposes. The others, limited to a girth of less than 3 ft. (.914 m.), are normally used as posts or as firewood. Some of the mangrove trees are good for tanning materials and may also be used for pulp making.

Following the advice of the Government of India, the West Bengal Government decided in 1975 to place wildlife management and allied matters under the Chief Wildlife Warden, along with the Project Tiger in the Sundarbans. Up to then both forests and wildlife management were under the Chief Conservator of Forests. So, the administrative control of the entire Basirhat range of Sundarbans, covering 2,585 sq. km. was transferred to the Project Tiger authorities from the Divisional Forest Officer, 24-Parganas.

The Lothian Island Sanctuary (14.67 sq. miles or 38 sq. km.) preserves tigers, pigs, spotted deers, and birds of various kinds. The Halliday Island Sanctuary, only 2.3 sq. miles (5.95 sq. km.) in area, has Royal Bengal Tiger and spotted deer. The Sajnekhali Sanctuary (139.92 sq. miles or 362.39 sq. km.) the largest of all, can be approached from Canning. The best time to visit this bird sanctuary is from July to December. The most conspicuous species here are Cattle Egret, Paddy Bird, Little Cormorant, Black necked Stork, Snake Bird, White Ibis, Green Bittern, Pelican, etc.

In terms of zoogeography the situation of South 24-Parganas is better than that of any other district of India. The strategic advantages are obviously due to its unique physical factors which no other district in the sub-continent (except the adjoining delta districts of Bangladesh) enjoys. Here, three great biocycles of ocean, fresh water and land come into contact around the margins of the largest delta of the world. The succession from ocean to land and to fresh water through estuaries is the most fascinating field for ecologists. The gradient from salt water to brackish water (salinity 0.5-30%) to entirely fresh water fluctuates back and forth with the tides. Since fresh water is less dense and warmer, it flows over the top of the salt water, with the result that strata with different physical characteristics are formed, which are inhabited by different kinds of fauna. Influx of fresh water is one of the principal sources of dissolved nutrients. Species of marine organisms extend towards fresh water as far as permitted by their tolerance of reduced salinity; and the species of fresh water are just the reverse way about. Thus the intermediate zone of brackish water under the salt marshes is one of the most fertile areas of the world. The foodchain is extremely diversified and the biomass productivity is several times more than that in the interior of the land or on the outer sea. However, a large fraction of land production of rice, wheat, etc., is directly usable by man as opposed to a small fraction of the production of the salt marsh. Foodchains in the salt marsh are based more on detritus feeding than directly on the vegetation; hence nutrients and energy must pass to higher consumer levels before they can be harvested for human use. The management problem here is one of rational utilization, rather than production.

With uniform hot-wet climate throughout the year, cold blooded animals have several generations a year; birds breed during every month but the wave of life crests during the rainy season and reaches its trough during the summer. Many insects complete their life cycle in three to four weeks and may have several generations during the wet period. On the other hand, high uniform temperatures are depressing for the metabolism and

activities of warm-blooded animals, and the pace of their activities is comparatively slow. Cold-blooded animals of West Bengal, particularly reptiles and anthropods, reach their largest adult sizes in the 24 Parganas. Invertebrate animals occur in the greatest variety and number on the forest floor.

The daily rhythm of animal activities lends further variety to the twice daily tidal rhythms, extremely high tides every 14 days and to the yearly cycle of wet and dry seasons. Most communities contain two sets of species, the diurnal and the nocturnal, which largely replace each other. At dusk, the daytime animals—most of the birds, insects and a majority of the lizards settle down for the night and from thereon a whole new world populates the darkness, owls, most of the mammals, primitive insects like the cockroaches and termites (bees and butterflies are associated with more modern flowering plants and hence are active during daylight hours) become active.

The entire district has been classified under the Oriental zoo-geographical region. But many elements of the Indo-Chinese, Ethiopian and Palaearctic are also found. These migrated to India during the Post-Tertiary periods through eastern, northern and western boundaries of the country. The ecosystems of the district have been disturbed by the sprawling conurbation, deforestation, extension of agriculture and irrigation, reclamation of swamps, and control of natural drainage lines. Such disturbances have wiped out some of the old species, such as, the lesser One-horned Rhinoceros, which were once common in this area. Pollution due to the industrial wastes and also change in salinity in the estuarine parts caused much changes in the biota. As a rule the foodchain has got a set-back and species, depending on particular food were forced to change their foraging areas.

Large mammals like the Leopard, Tiger, Spotted Deer and Wild Boar restrict themselves mainly to the Sundarbans areas. The Royal Bengal Tiger is fairly common in the jungles of Sundarbans. In fact, it is impossible to land anywhere in the Reserve Forests without coming across the pugs, or footprints of that animal. The average length of the males is 3 metres and of the females, about 2.8 metres. The young ones are more handsome, their colouring is more vivid, and the stripes darker and closer together. A peculiar adaptation to environment is seen in the tigers frequenting the sand dunes of the seaface. These sand dunes are covered with tall, brown spear-grass, and immediately behind lie the glades of green herbage, on which deer feed and pigs come out. A tiger, in such surroundings, would be rendered conspicuous by his stripes, so the sand dune tiger has almost lost his stripes. Tigers are not gregarious in habit; more than two are seldom seen together, and though these may frequent the same haunt in a day, they almost invariably separate at night while searching for prey. Tigers in the Sundarbans very often carry away wood or other forest produce, and some man-eaters have been known to stop work in new clearances by the frequent toll levied on human life. With steady extension of forest clearing, their number has decreased. Tigers breed during the months from December to June, the period of gestation being from 14 to 15 weeks. To-day all efforts are towards increasing its population; but in O'Malley's time it was the other way about. "No elephants can be used in the jungles of this district, and, owing to the dense growth of the wild date and the cane, it is impossible to beat. The only method of killing tigers is by sitting up over kills or bait. Like other animals in the Sundarbans, tigers drink the salt water of the rivers and creeks, so that, as a rule, there are no water holes to sit over. The Government reward for their destruction was Rs. 50 on the forest reserves, and Rs. 25 elsewhere.

The impact of disturbances in the eco-system (due to conversion of natural forests, grasslands and wet areas, to agro-industrial complex) have affected the avifauna. However, the new rural belts created new home for some. Besides the resident birds, a vast number of Palaearctic species come down to the district on migration during winter. Certain elements of the Indo-Chinese as well as Ethiopian sub-region are included in the avifauna of the district. Some fear that pollution due to industrial wastes and change in salinity with decreasing volume of water in the Hooghly are adversely affecting the food chain, and despopulation of certain species.

The district has two types of crocodiles, Estuarine (*Crocodilus porosus*) and Marsh (*C. Palustris*). The former is the man-eating crocodile and is restricted only to the lower reaches of the deltaic channels and new

islands coming up the seafloor. It differs from the Marsh type in having a narrower head, with two ridges on the skull converging towards the snout, and, in the adult, four, instead of five, teeth in the upper jaw counting from the median line to the notch. The larger of the Marsh variety are by no means averse to attacking man, though it generally lives on fish and other animals, and being a cannibal even feeds on the remains of its own kind. It is found in the upper reaches of all the tidal channels, bays and other stagnant pools. Both species bask on the sand pits and banks which are left uncovered at low tide, where, especially during the winter, they will be found lying with their mouths wide open. It is a mystery why they do not open their mouths at other seasons. "The *Crocodilus porosus* grows to great lengths: a specimen in the British Museum is recorded to be 33 feet. It breeds in certain favourite rivers; the eggs are laid amongst mounds of leaves, the fermentation of which hatches the young. The Fuldobi creek, for instance, will be found in January and February full of young crocodiles. As the animals frequent the same spots year after year, they can be waited for and shot. The cry of a crocodile is a long drawn howl. The snub-nosed crocodile (incorrectly called an alligator) may be seen in large numbers along banks of streams, especially during the cold weather. He is known to overturn boats for the purpose of killing human beings.

At times, they are so daring that they enter homesteads at night and carry off the first person they can seize. They also enter fields during the day, and kill and carry away cattle. They are most ferocious, and cause great loss of life. They are often harpooned by village people, who go after them in boats for the purpose, and not unfrequently bring them in amidst the rejoicings of the entire village. These two varieties are becoming scarce. A third variety of the Crocodilians the Gharial (*Gavialis gangeticus*) once abundant in the Ganga river system is almost extinct and has been enlisted as an endangered and rare type.

IMPORTANT PLACES :

Sundarban Forest

Sundarban was previously created a wildlife sanctuary in 1977, having been designated as the core area of Sundarbans Tiger Reserve in December 1973.

The Sundarbans, covering some 10,000 sq. km of mangrove forest and water (of which some 40% is in India and the rest in Bangladesh), is part of the world's largest delta (80,000 sq. km) formed from sediments deposited by three great rivers, the Ganges, Brahmaputra and Meghna, which converge on the Bengal Basin. The whole Sundarbans area is intersected by an intricate network of interconnecting waterways.

The entire mangrove forest extends over an area of 4,262 sq.km, of which 2,320 sq.km is forest and the rest is water, and is called

Sundarbans National Park : Lies south-east of Calcutta in the 24-Paraganas District of West Bengal and forms part of the Gangetic Delta, which borders on the Bay of Bengal. Consists of Matla, Goshaba, Chhotahardi, Mayadwip, Chamta, Gona and Baghmara forest blocks, which are bounded by the Matla/Bidya and Haribhanga/Raimangal rivers to the east and west, respectively. The northern boundary is buffered by Netidhopani and Chandkhali forest blocks. 21°31'-21°53'N, 88°37'-89°09'E. Established as a national park on 4 May 1984 the

Mangrove

Sundarban owing to the dominance of the tree species, locally known as 'sundari' because of its elegance. It is the moist tropical seral forest, comprising beach forest and tidal forests.

Beach forest occurs on coastal islands comprising low sand-dunes. Salt-water forest, occurs between the Raimangal and Matla rivers, where freshwater flows from the Ichhamati River into the Raimangal River. Characteristic species include garjan, kankra, goran, and baen. Sundari is scattered over areas of higher elevation, along with keora, gengwa, dhundul and the date palm or hental.

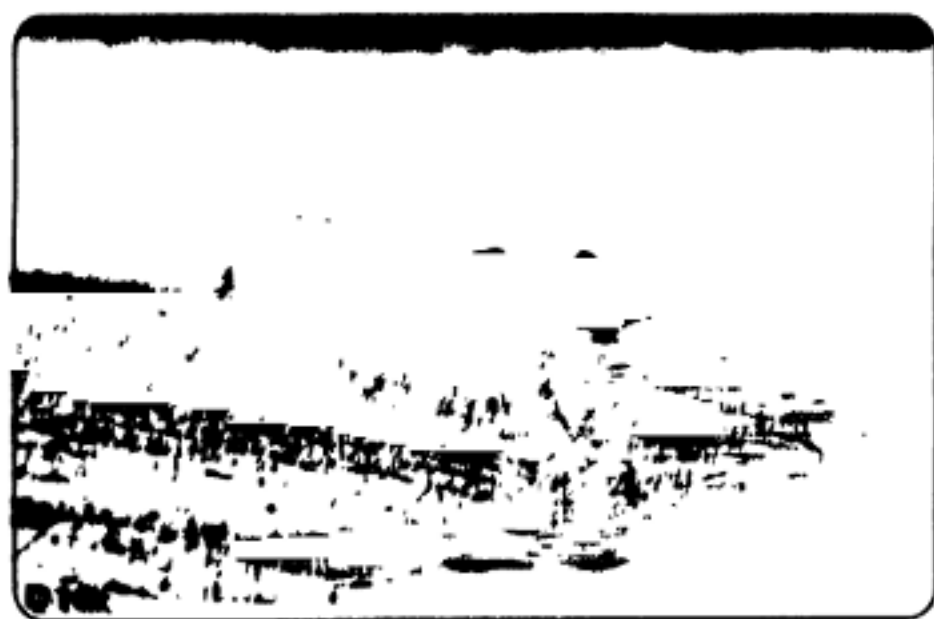

Sundarban Forest

Low mangrove forest (3-6m high) occurs between Matla and Muriganga, to the west of the national park and tiger reserve, this area being devoid of freshwater because its rivers are cut off from the ramifications of the Hooghly in the north. Soft mud, which is submerged by the tides, supports a dense forest, very similar in composition to salt-water Sundari forest except that sundari and golpata are virtually absent. Goran and baen are the commonest trees, occupying extensive areas but only growing up to 2m. Clusters of hental are very common.

The Sundarbans is the only remaining habitat in the lower Bengal Basin for a great variety of faunal species. Some of this variety, however, has already been lost owing to the reclamation of the broad transitional

belt of habitat for agriculture, combined with the higher salinity resulting partly from the large-scale irrigation schemes in the upper reaches of the Ganges. Species include the Javan rhinoceros and water buffalo, swamp deer, gharial, narrow-headed softshell turtle etc.

The tiger population here is the largest in India. Relatively high frequency of encounters with local people (within the tiger reserve) is probably largely responsible for the notorious man-eating habits of the Sundarbans tiger. The fishing cat abounds. The only ungulates are wild boar, main prey species of

Royal Bengal Tiger

the tiger, and spotted deer, which is plentiful. Aquatic mammals that frequent the tidal waters include the Ganges dolphin, Indo-Pacific hump-backed dolphin, Irrawaddy dolphin and finless porpoise.

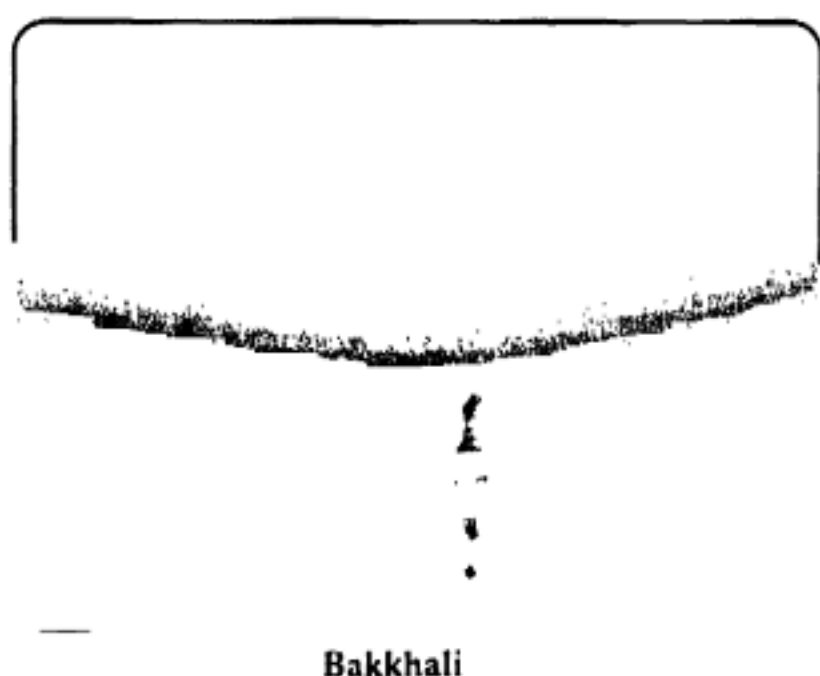

The Sajnakhali area contains a wealth of water birds, noteworthy residents including Asian openbill stork, black-necked stork, greater adjutant stork, white ibis, swamp francolin, white-collared kingfisher, black-capped kingfisher and brown-winged kingfisher. This area is important for waders, including the Asian dowitcher, a rare winter migrant. Interesting marsh birds are also found in the reclaimed lands, while birds of prey include osprey, Pallas's fish eagle, white-bellied sea-eagle, grey-headed fishing eagle, peregrine falcon, Oriental hobby, northern eagle owl and brown fish owl. A variety of terns and kingfishers are seen on the large rivers and in flooded areas

The Sundarbans provide important habitat for a variety of reptiles including river terrapin, olive ridley, estuarine crocodile, monitor lizard, water monitor and Indian python. The only species of turtle known to nest in the Sundarbans is the olive ridley but hawksbill has been caught in fishermen's nets. The creeks are spawning grounds for approx. 90 species of fish, near about 48 species of crabs and a large variety of molluscs.

Baghmara Forest Block contains the ruins of a city built by the Chaand Saudagar merchant community approximately 200-300 AD. Much later, during the Moghul Empire, Raja Basanta Rai and his nephew took refuge in the Sundarbans from the advancing armies of Emperor Akbar. The buildings which they erected subsequently fell to Portuguese pirates, salt smugglers and dacoits in the 17th century. The ruins are evident at Netidhopani and elsewhere.

Apart from being the only mangrove forest in the world inhabited by the tiger, the Sundarbans contains a rich and unique biota, with a notable number of threatened reptiles. It also provides the main nursery for shrimps along the whole coast of eastern India, as well as its creeks being the spawning grounds for a wealth of fish and crustaceans. That part of the Sundarbans lying in Indian territory is managed under the aegis of Project Tiger. In the original management plan, the core area, now a national park, is designated a wilderness zone (133,010ha) within which 12,440ha is earmarked as a Primitive Area strictly reserved for preservation. The remaining area comprises a buffer zone. No forestry operations or any other type of interference is allowed in the core area. Elsewhere in the tiger reserve, forests are subject to 'selection-cum-improvement' felling. Exploitation of the hental date palm and golpata palm, and seasonal collection of honey are allowed on a permit basis. Local people may also fish in the tidal waters but require a permit for firewood used during such trips. In 1982, 24 captive-bred estuarine crocodiles were re-introduced to the area. There has been a marked improvement in the biota, which has ultimately been reflected in a steady rise in the tiger population.

Siltation appears to be an increasing problem. For example, it is thought by local fishermen that within the next few years the Matla River will no longer be navigable up to Canning Town. Oil spills are a potential threat which cause immense damage, especially to aquatic fauna and seabirds and probably also to the forest itself into which oil could be carried by high tides. An average of 45 people were killed annually by tigers in 1975-1982. This casualty rate has fallen since the introduction of various measures, including deterrents in the form of electrified human dummies and face masks worn on the back of the head. In 1986 there were 28 victims and in 1987, 24, but none of these had been using the face-masks. Reclamation in the Sundarbans ecosystem has led to problems of salinisation and soil acidification although the degree to which this affects the national park is not known.

Sudhanyakhali Watch Tower. Amidst 66 species of mangrove trees ranging from 6 to 12 ft, the Royal Bengal Tigers reign. And just beneath the tower, the pond Serving fresh water attracts many animals for a drink. Even, a tiger is not an uncommon sight. Sundarbans shelter 251 tigers and 3000 Cheetals(deer).

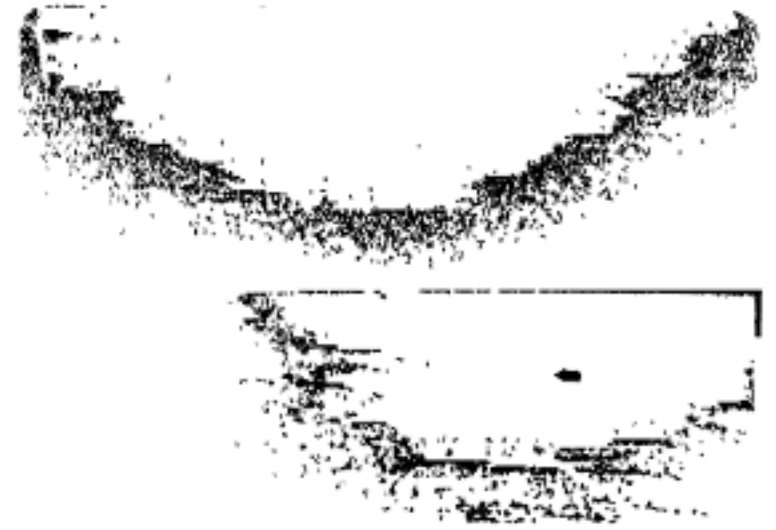

Bakkhali : 130 km from Calcutta, 82 km from Diamond Harbour and 25 km from Namkhana, Bakkhali is the second best sea resort of West Bengal. On the shores of Bay of Bengal, shaded by casurina plantations and filled with calm and peace the place has attracted tourists

from all over Bengal. Fraserganj is 2 km walk down the beach. Bus for Namkhana is also available.

Andrew Fraser, the then Deputy Governor of Bengal, had fallen in love with Narayantala-an island, whose dimensions are 15x5 Sq km only. Gradually, by his innovative spirit, it turned into a health resort and sea resort. Shops were constructed, coconut plantation done to beautify the island and thus was created Fraserganj. Nothing of those coconut trees or shops survived but the beach is very romantic. Trip by motor

launch, to Jambudwip is possible. The blue heavens and the blue sea waters have embraced each other here at Jambudwip and her still beauty is only punctuated by the fisher-men, drying out their nets.

Diamond Harbor : Hajipur of the past, she is now known as Diamond Harbour. Although she has lost her importance as a port, her fame as a picnic spot is spreading day by day. 48 km from Calcutta, Diamond Harbour is well connected by rail and road. Govt buses from Esplanade leave for Diamond Harbour almost every hour. Moreover, buses going to Raidighi, Kakdwip and Namkhana pass through Diamond Harbour. Diamond Harbour still has a lighthouse of the past, ruins of a Portuguese fort and the Bhagirathi still quietly flows by. The expanse of the river, here, reminds you of the sea. You may make a river-trip hiring a boat. A motor launch, if you wish, would take you to Kunkrahati, near Haldia on the opposite shore.

Diamond Harbour

Kapil Muni Ashram

Sagar Islands : Sagardwip or Gangasagar is one of those sacred Hindu pilgrimages-where a visit once is worth a lifetime. The Sagar is the delta of the Ganges consisting of 51 islands. It measures about 580.9 sq km in all. It was a conglomerate of deserted islands until 1822, when the British Govt sent 5 Arakan families to build a settlement here. Those 5 families have now multiplied into 25,000 families consisting of a total population of 3 lakhs.

The preparation for the Sagarmela fair starts about a month or two ahead. Temporary stalls are constructed using Hogla leaf in over 3 acres of land. The fair runs for about 14 days. The fair-takes the character of any other village fair. But, the most desired part of this trip is to gain holy solace. Millions of pilgrims from all over India pour in during the days. A dip in the waters at the hours of daybreak on that particular day of Makar Sankranti is considered as holy as performing an Ashwamedha Yagna. It washes away all your accumulated sins. Here existed the ashram of Kapilmuni. But the sea devoured it decades ago. A new temple has been constructed few yards away in 1947. Kapilmuni, a great saint is said to have burnt to ashes the sixty thousand children of King Sagar by the fire of his eyes. Later, as per Bhagirath's entreaties, the River Ganga reached here to pour life into these mortal souls.
